MACHINE LEARNING

In Q1 to Q11, only one option is correct, choose the correct option:

| A) Least Square Error B) I | do we use to find the best fit line for data in Linear Regression? Maximum Likelihood Both A and B |
|---|--|
| 2. Which of the following statement A) Linear regression is sensitive to B) linear regression is not sensitive C) Can't say D) none of these Ans: A) Linear regression is sensitive | to outliers |
| 3. A line falls from left to right if a s A) Positive B) Negative C) Zero D) Undefine Ans: A) Negative | |
| 4. Which of the following will have variable? | symmetric relation between dependent variable and independent |
| | Correlation None of these |
| 5. Which of the following is the reast A) High bias and high variance C) Low bias and high variance Ans: C) Low bias and high variance | B) Low bias and low variance D) none of these |
| 6. If output involves label then that itA) Descriptive modelC) Reinforcement learningAns: B) Predictive model | model is called as: B) Predictive modal D) All of the above |
| | Removing outliers Regularization |
| | aset which technique can be used? Regularization SMOTE |
| 9. The AUC Receiver Operator Cha classification problems. It usesA) TPR and FPRC) Sensitivity and SpecificityAns: A) TPR and FPR | racteristic (AUCROC) curve is an evaluation metric for binaryto make graph? B) Sensitivity and precision D) Recall and precision |
| 10. In AUC Receiver Operator Charcurve should be less.A) True B) FalseAns: A) True | racteristic (AUCROC) curve for the better model area under the |

- 11. Pick the feature extraction from below:
- A) Construction bag of words from an email
- B) Apply PCA to project high dimensional data
- C) Removing stop words
- D) Forward selection

Ans: Construction bag of words from an email

In Q12, more than one options are correct, choose all the correct options:

- 12. Which of the following is true about Normal Equation used to compute the coefficient of the Linear Regression?
- A) We don't have to choose the learning rate.
- B) It becomes slow when number of features is very large.
- C) We need to iterate.
- D) It does not make use of dependent variable.

Ans: A) We don't have to choose the learning rate.

and B) We don't have to choose the learning rate.

Q13 and Q15 are subjective answer type questions, Answer them briefly.

13. Explain the term regularization?

Ans: Regularization is a technique used for tuning the function by adding an additional penalty term in the error function. The additional term controls the excessively fluctuating function such that the coefficients don't take extreme values.

14. Which particular algorithms are used for regularization?

Ans: There are three main regularization techniques, namely:

- Ridge Regression (L2 Norm)
- Lasso (L1 Norm)
- Dropout

15. Explain the term error present in linear regression equation?

Ans: Within a linear regression model tracking a stock's price over time, the error term is the difference between the expected price at a particular time and the price that was actually observed.
